Q: What is the best workaround to this problem when targeting.NET 3.5? I have some legacy code written for.NET 2.0 which is being ported to.NET 3.5. The code is using reflection to find types by type name, which is failing, so the client is having to make changes to his existing types (i.e. changing the name to be a.NET 3.5 type) to get it to work. Here is an example class and method below: namespace Legacy.GenericTests { public class CustomTypeArgumentTest : GenericTestBase { public override string[] TypeNames { get { return new string[] {"TestType"}; } } public override object[] TestTypes { get { return new object[] {"TestType"};
