Creative Cloud sign-ups of course come with the update, **but** you can download Lightroom 5 as well at this link. Regardless of where you live, expect a free core update to happen around the same timeframe. The design of the toolbox itself is also much cleaner with a few tweaks. I even prefer the new user interface. **Still room for improvement...**

As mentioned before, the Spot Removal tool is a bit sluggish. It is also not as easy to find the right target and the tool does not have convenient options for alignment. To start with, the users can mark the area to be removed. You should first try this option several times to get the feel of the tool since it is neither intuitive nor obvious. It is one of those tools that make the most use of the new Document Panel that extends when you click in the Lists section. We get a status bar that notifies us when the selected area is moving across the image, which makes it easier to test our levels and masks.

It can be used to create line art or shape gradients. The new gradient stroke option is only available for PDF files. The type tool now has a Shape layer bound to it. The Gradient Banding option has been removed and replaced with the far more powerful Gradient Bucket Fill mode.

In recent years, Adobe Photoshop has worked to streamline the user experience and increase efficiency. For example, the Action Wizard in Photoshop CC makes it easy for anyone to take advantage of the rich automation features of the program. Users have the ability to create complicated large presentations, detailed illustrations, etc. It's no surprise that so many people are excited about this new version of Photoshop. It's the latest leap forward in an already great program. Photoshop is a powerful piece of software. Like nearly every other Adobe product, it has some real power. But it's not a perfect tool.
